TISSUE SPECIFICITY: EXPRESSED IN A WIDE VARIETY OF TISSUES, WIT
HIGHEST LEVELS IN THE HEART AND SKELETAL MUSCLE.
DOMAIN: INTACT BH3 DOMAIN IS REQUIRED BY BIK, BID, BAK, BAD AND
BAX FOR THEIR PRO-APOPTOTIC ACTIVITY AND FOR THEIR INTERACTION
WITH ANTI-APOPTOTIC MEMBERS OF THE BCL-2 FAMILY.
APOPTOTIC MEMBERS OF THE BCL-2 FAMILY.
APOPTOTIC CONTAINS 1 BCL-2 HOMOLOGY DOMAIN 1 (BH1).
SIMILARITY: CONTAINS 1 BCL-2 HOMOLOGY DOMAIN 2 (BH2).
SIMILARITY: CONTAINS 1 BCL-2 HOMOLOGY DOMAIN 3 (BH3).
SIMILARITY: CONTAINS 1 BCL-2 HOMOLOGY DOMAIN 3 (BH3).
SIMILARITY: BELONGS TO THE BCL-2 FAMILY.

The complete sequence of the 1,683-kb pSymB megaplasmid from the
fixing endosymbiont Sinorhizoblum meilloti.*;
Proc. Natl. Acad. Sci. U.S.A. 98:9889-9894(2001).
I- FUNCTION: INVOLVED IN COPER TRANSPORT (BY SIMILARITY).
I- FUNCTION: INVOLVED IN COPER TRANSPORT (BY SIMILARITY).
I- CATALYTIC ACTIVITY: ATP + H(2)0 - ADP + ORTHOPHOSPHATE.
I- SUBCELLULAR LOCATION: Integral membrane protein (By Similarity
GEI-EZ ATPASES). SUBFAMILY IB.
GEI-EZ ATPASES). SUBFAMILY IB.
SIMILARITY: CONTAINS 2 HMA DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ATC2_RHIME STANDARD; PRT; 827 AA. p58342; p78342; 01-MAR-2002 (Rel. 41, Created) 01-MAR-2002 (Rel. 41, Last sequence update) 01-MAR-2002 (Rel. 41, Last sequence update) 01-MAR-2002 (Rel. 41, Last sequence update) Copper-transporting ATPase 2 (DC 3.6.3.4). The peptides AAB37001-B37058 represent analogues of the peptide portion of the conjugate. The peptides represent analogues of the peptide portion of the conjugate. The peptides represent analogues of a subject of a pepticularity polypeptide corresponding to amino acids 72-97 of the BH3 domain of the cell death agonist Bad. The peptide conjugate is cuseful for modulating apoptosis in the cells of a subject, or for CC useful for modulating apoptosis in the cells of a subject, or for CC apoptosis in cancer cells. It is also useful for inhibiting Bcl-2 (CC apoptosis in cancer characterized by cancer cells that CC express Bcl-2. The cancer includes prostate, colorectal, gastric, conjugate is also useful for treating a colorectal, gastric, conjugate is also useful for treating disorders, acquired confurence (AIDS), stroke or mycoardial infartion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match 100.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is a specifically claimed truncated BAX protein tBAX78 which inhibits neuronal apoptosis induced by trophic factor deprivation. The protein consists of first 78 amino acids of human BAX alpha, that includes the N-terminal region and BH3 domain. It lacks the BH1, BH2 and C-terminal transmembrane domains of the fill-length BAX alpha. The tBAX protein lacking only the transmembrane domain has been shown to have anti-apoptotic activity. The present sequence is used to treat diseases associated with neuronal apoptosis, e.g. neurodegenerative diseases, peripheral nerve injury, spinal cord injury, head trauma and stroke.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC contains a single base deletion relative to the wild-type (ARX19764),
CC contains a single base deletion relative to the wild-type (ARX19764),
CC causing a frameshift which leads to translation of a premature stop
CC codon, resulting in a truncated protein. However, the domain responsible
CC for its function is still present in the truncated protein. Bax (Bcl-2
CC associated X protein) is a proapoptotic member of the Bcl-2 gene family.
CC Bax functions as a primary response gene in the p53-regulated apoptotic
CC expression of Bax is upregulated at the transcriptional level by p53, and
CC expression of Bax is upregulated at the transcriptional level by p53, and
CC expression of Bax protein can function as a homodimer, or it can
CC induction of p53. Bax protein can function as a homodimer, or it can
CC provides a means of controlling cell death of Bcl-2 family members
CC model suggests that the relative amounts of Bcl-2 and Bax determine the
CC susceptible to apoptosis following exposure to an apoptotic stimulus.
CC Additionally, Bax can function in its monomeric form to accelerate cell
CC death. Use of novel adenoviral vectors containing this Bax gene may
CC cell cycle arrest and/or apoptosis in malignant cells carrying p53
CC mutations. In addition, Bax overexpression could provide the apoptotic
CC effect of p53 without the need for p53 itself.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

This sequence represents human Bax protein. Bax is a protein which is CC associated with the human bc1-2 alpha and beta proteins, the sequences cof which are given in AAR71404-05 respectively. bc1-2 is encoded by a CC proto-oncogene and is capable of inhibiting apoptosis in many cc hematopoietic cell systems. bc1-2 is a 26 kD membrane-associated CC tytoplasmic protein and is thought to function by enhancing the survival cof hematopoietic cells of B and T origins rather than directly promoting CC promote cell cycle progression nor does it necessarily alter the dose reponse to limiting concentrations of II-3. bc1-2 has been shown to CC form heterodimers with this 21 kD protein, Bax. Overexpressed Bax CC accelerates apoptotic cell death induced by cytokine deprivation in an CC II-3 dependent cell line, and it also acts to counter the death repressor activity of bc1-2. Therefore, the ratio between bc1-2 and Bax determines CC cell survival or death following an apoptotic stimulus. The invention CC gives a mutant form of bc1-2 in which there is at least one amino acid CC substitution or deletion in the BHI or BH2 domains. This makes the CC mutant protein substantially incapable of binding Bax and/or incapable collages in autiformulation between the activity by faccinate in a protein substantially incapable of binding Bax and/or incapable collages in autiformulation between the activity by faccinate and catherines and eliminating self-reactive
                                                                                                                                                         clones in autoimmunity by favouring death effector molecules. Up regulating bcl-2is beneficial in treatment and diagnosis of immunodeficiency diseases, including AIDS and neurodegenerative and ischamble and including AIDS and neurodegenerative and ischamble and including AIDS and neurodegenerative and ischamble and including AIDS and neurodegenerative and ischamble and including AIDS and neurodegenerative and ischamble and including AIDS and neurodegenerative and ischamble and including AIDS and neurodegenerative and ischamble and including AIDS and neurodegenerative and ischamble and including AIDS and neurodegenerative and ischamble and including AIDS and neurodegenerative and ischamble and including AIDS and neurodegenerative and ischamble and including AIDS and neurodegenerative and ischamble and ischamble and including AIDS and neurodegenerative and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and ischamble and isc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                in excess, however, Bax homodimers predominate and the cell becomes susceptible to apoptosis following exposure to an apoptotic stimulus. Additionally, Bax can function in its monomeric form to accelerate cell death. Use of novel adenoviral vectors containing the Bax gene may augment and complement wild-type p53 gene therapy, which induces a cell cycle arrest and/or apoptosis in malignant cells carrying p53 cell cycle arrest and/or apoptosis in malignant cells carrying p53
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     induction of p53. Bax protein can function as a homodimer, or it can heterodimerise with other Bc1-2 gene family members such as the antispoptotic protein Bc1-2. Heterodimerisation of Bc1-2 family members provides a means of controlling cell death via the "rheostat" model. This model suggests that the relative amounts of Bc1-2 and Bax determine the susceptibility of a cell to undergo apoptosis. If Bc1-2 is in excess, Bc1-2 Bax heterodimers predominate and cell death is inhibited. If Bax is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Bax functions as a primary response gene in the p53-regulated apoptotic pathway. The Bax gene promoter has 4 p53 binding sites and the expression of Bax is upregulated at the transcriptional level by p53, ar Bax mRNA and protein expression have been shown to increase following induction of p53. Bax protein can function as a homodimer, or it can be be a simple of p53. Bax protein can function as a homodimer, or it can be protein the protein can function as a homodimer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         BH3 domain; cell death agonist; bcl homology domain; BCL-2 family; apoptosis promoter; cancer cell; virus infected cell; inflammation; autoantibody producing cell; cancer; lymphoproliferative condition;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents human wild-type Bax protein. A naturally occurring mutant protein (AAY34149) was also isolated. Bax (Bcl-2 associated X protein) is a proapoptotic member of the Bcl-2 gene family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents the human BAX protein. The invention relates to a bcl homology domain 3 (BH3 domain), derived from a proapoptotic member of the BCL-2 family. The BH3 polypeptide can be used in a method for promoting apoptosis in a target cell, especially where the cell is a cancer cell a virus infected cell or an autoantibody producing cell. The BH3 polypeptide can be used in therapeutic compositions for treating disease including cancer, other lymphoproliferative conditions, arthritis, inflammation, and autoimmune diseases, which may result from the down regulation of cell death
                              DNA composition encoding bcl-2 two-hybrid and reporter system - identifying modulators of bcl-2 function
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents a human Bcl-2 associated protein designated Bax. The Bax protein is used in a composition which comprises a bcl-2 family member polypeptide, a naturally occurring Bax polypeptide and an antibody that binds to the Bax polypeptide. The composition is used to identify modulators of bcl-2-related function, e.g. substances that inhibit binding of Bax to bcl-2, which would be potentially useful as drugs for modulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                10-NOV-1994;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A human Bcl-2 associated protein designated Bax
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                            The present sequence represents a human BCl-2 associated protein designated Bax. The Bax protein is used in a composition which comprises a bcl-2 family member polypeptide, a naturally occurring Bax polypeptide and an antibody that binds to the Bax polypeptide. The composition is used to identify modulators of bcl-2-related function, e.g. substances that inhibit binding of Bax to bcl-2, which would be potentially useful as drugs for modulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       05-JAN-1999

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAY70827 standard; Protein; 192
                                                                                                        The present sequence is a human BAX alpha protein, a pro-apoptotic protein which is a member of BCL-2 family of proteins that are involved in regulation of neuronal programmed cell death. The patent discloses specific truncated proteins derived from BAX alpha which inhibit neuronal apoptosis induced by trophic factor deprivation. The anti-apoptotic truncated BAX (tBAX) proteins include tBAX70, tBAX78 and their mutants. These proteins contain the N-terminal region and at least a portion of the BH3 domain of BAX alpha and lack the BH1, BH2 and C-terminal transmembrane domains. The tBAX protein lacking only the transmembrane domain has been shown to have anti-apoptotic activity. The tBAX proteins are used to treat diseases associated with neuronal appropriate activity appropriate and contains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; truncated BAX protein; tBAX; BAX alpha; BCL-2 family; head trauma; neuron; anti-apoptotic; cerebroprotective; neuroprotective; neuroactive; apoptosis; treatment; neurodegenerative disease; peripheral nerve injury; spinal cord injury; stroke; pro-apoptotic; PCD; programmed cell death.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ద
                                                                                                                                                          The present sequence represents the Bax protein. A pro-apoptotic peptide can be derived from the BH3 domain. The peptide is an inducer of formation of a channel for transport of cytochrome C out of mitochondria. The peptide induces apoptosis in a cell. The peptide changes the ion selectivity of an anti-apoptotic BCL-2 family member from potassium selective to chloride selective. The specification cause describes inhibitors of apoptosis in cells. The inhibitors and inducers can be used to treat patients, preferably humans with a condition mediated by excessive down-regulation of apoptosis, especially conditions chosen from neoplasias, disease caused by Epstein Barr virus, African swine fever virus and adenovirus, inflammation and autoimmune disease or a condition mediated by conditions, cancer, arthritis, Crohn's disease, inflammation and autoimmune disease or a condition cell death, neurodegenerative disease, ischemic and reperfusion cell death, infertility and wounds. The methods can also be used to identify

                                        The present invention relates to a method of modulating apoptosis of a cell. The method comprises administrating to the cell an agent, comprising a BH1 domain or BH2 domain, capable of modulating formation c at least one complex selected from bcl-2:bcl-2 complexes, bcl-XL:bcl-XL complexes, bcl-2 associated X protein (Bax):Bax complexes, bcl-XL:Bax complexes or bcl-XL:Bax complexes. Modulating apoptosis is especially useful in cancer therapy, and treating autoimmunity, immunodeficiency diseases (e.g. AIDS), reperfusion injury, mycoardial infarction, stroke, traumatic brain injury, neurodegenerative diseases, aging, ischaemia, toxemia, infection, hepatitis, transplant rejection, and tymphoproliferative diseases. The present sequence is human Bax, which
                                                                                                                                                                                                                                                                                                                                                                                                                                                              10-NOV-1994;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; Bax; cytostatic; immunosuppressive; immunostimulant; infection; apoptosis modulator; bcl-2 associated x protein; cancer therapy; AIDS; autoimmunity; immunodeficiency; reperfusion injury; stroke; aging; myocardial infarction; traumatic brain injury; ischaemia; neurodegenerative diseases; hepatitis; transplant rejection; toxemia; neurodegenerative diseases;
                                                                                                                                                                                                                                                                                                                 The present invention relates to a method of modulating apoptosis of a cell. The method comprises administrating to the cell an agent, comprising a BHI domain or BH2 domain, capable of modulating formation or at least one complex selected from bcl-2:bcl-2 complexes, bcl-12:bcl-2xL:bcl-XL:complexes, bcl-2 associated X protein (Bax):Bax complexes, bcl-2:Bax complexes or bcl-XL:Bax complexes. Modulating apoptosis is especially useful in cancer therapy, and treating autoimmunity, immunodeficiency diseases (e.g. AIDS), reperfusion injury, myocardial infarction, stroke, traumatic brain injury, neurodegenerative diseases, aging, ischaemia, toxemia, infection, hepatitis, transplant rejection, and lymphopyroliferative diseases. The present sequence is human Bax, which was used in a sequence alignment in the present invention, with murine was used in a sequence alignment in the present invention, with murine is a complexed to the complex of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes of the complexes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human bcl-2 associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             22-MAY-2001

SKP2-like proteins (ZF) and CUL-1 (a member of the cullin/ CDC53 family of proteins). The method is useful for altering the level of p27, cyclin E, Max, Mad, c-Myc, MDM2, p53, Bax, Bad or Bc1-2 polypeptide in a cell. SKP2 and SKP2-like protein levels are useful for detecting tumours, and in monitoring tumor treatment in a mammal. Agents that modulate interactions between SKP and target proteins are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CUL-1; cullin; CDC53; p27; cyc1Bad; Bcl-2; tumour; cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S-phase kinase associated protein; SKP1; SKP2; SKP2-like protein; ZF; CUL-1; cullin; CDC53; p27; cyclin E; Max; Mad; c-Myc; MDM2; p53; Bax;

This channel is a member of the BCL-2 family. Apoptosis modulators are also provided, including Bcl-2deltaTM and BaxdeltaTM.
The present invention describes a method for screening for an apoptosis inhibitor or an apoptosis promoter in which VDAC-liposome, an index substance which can pass VDAC and a sample are incubated and the change in the concentration of the index substance during the incubation is detected to judge the presence of apoptosis inhibition or apoptosis promotion. The apoptosis inhibitor or the apoptosis promoter can be used as a drug and a diagnostic agent for various diseases caused by
                                                                                                                                                   Screening of an apoptosis inhibitor or promoter which can be used as drug and a diagnostic agent for various diseases caused by apoptosis inhibition or apoptosis promotion -
